Cariflex™ Isoprene Rubber (IR) for Medical Stoppers
Norio Masuo, Kraton Innovation Center, Tsukuba

Kraton Performance Polymers, Inc. contracted a 3rd party laboratory to conduct a medical stopper study to compare the performance of halo-butyl rubber against two major synthetic polyisoprene types: Ziegler-Natta IR, and Cariflex IR, which is produced through an anionic process. Polyisoprene elastomers, such as Cariflex IR, are synthetic, predominantly stereo regular, and resemble natural rubber in molecular structure and properties. The study showed that medical stoppers made with Cariflex IR could easily pass the extraction test under Japanese Pharmacopeia (JP) 7-03 (XV revision 2006), herein referred to as JP, which is the most stringent protocol, while Ziegler-Natta IR failed or only marginally passed.

To inquire about the complete study, please contact cariflex@kraton.com.

Abstract
There are two major synthetic polyisoprene types with high cis-1, 4 content. They include Ziegler-Natta IR, polymerized in the presence of a titanium/aluminum catalyst, and anionic IR, which is polymerized with an alkyl-lithium initiator. These different processes yield different products. Cariflex IR offers many features and benefits including protein-free, low residual metals, low gel content (~0%), odor-free, and excellent coring properties (low risk of fragmentation). Cariflex IR is a highly clean rubber, which therefore can be used in medical stopper closures for glass and plastic infusion bottles, IV bags, and vials where high gas barrier property is not essential.

Cariflex Polyisoprene Products
Multiple formulations based on Cariflex IR0307, Cariflex IR0310, Ziegler-Natta IR, and halo-butyl rubber were used to produce stoppers of equivalent hardness. The extraction testing protocol included JP, which can also be related to the Chinese medical standard (YBB 00042005). Test results were determined in a two-part extraction series. In the Series 1 test, Cariflex IR0307 and IR0310 gave lower KMn04 reducing substances than Ziegler-Natta IRs and easily passed JP. Ziegler-Natta IR [ZN-IR-A, general purpose grade] failed the JP extraction test. Ziegler-Natta IR-B, medical grade, was marginal to pass the JP extraction test (limited safety margin). In Series 2, Cariflex IR0307 gave consistent results in the extraction test and passed all JP specs. Ziegler-Natta IR-C medical grade failed to meet JP specs. Bromo-butyl rubber [BR-IIR-B] gave low level of extracts and passed JP specs, but slowly released impurities during ageing and was inferior in gamma radiation resistance.

Summary and Conclusion
Cariflex IR based medical stoppers can easily pass the extraction test under JP, which is the most stringent testing protocol. Ziegler-Natta IR medical grades did not always meet JP specs. Halogenated butyl rubbers gave much lower oxygen and moisture permeability than IR rubbers. However, they generated more extractables as the polymer degraded in long-term service life. Halogenated butyl rubbers were readily degraded by gamma ray radiation, while IR rubbers were much more stable. Cariflex IR based medical stoppers allowed even lower needle insertion force than Ziegler-Natta IR based stoppers. This could have been related to the lower elastic modulus of Cariflex IR than Ziegler-Natta IR. Cariflex IR based medical stoppers gave outstanding performance in the coring test, better than any other rubber stoppers, which eliminated concerns about contamination of rubber fragments into liquid drugs. Cariflex IR can be used for IV bags and vial stoppers where high gas barrier property is not necessary. Cariflex™ Isoprene Rubber (IR) for Medical Stoppers.
Company Profile

Kraton Corporation (NYSE: KRA) is a leading global producer of styrenic block copolymers, specialty polymers and high-value performance products derived from pine wood pulping co-products. Kraton’s polymers are used in a wide range of applications, including adhesives, coatings, consumer and personal care products, sealants and lubricants, and medical, packaging, automotive, paving and roofing applications. As the largest global provider in the pine chemicals industry, the company’s pine-based specialty products are sold into adhesive, road and construction and tire markets, and it produces and sells a broad range of performance chemicals into markets that include fuel additives, oilfield chemicals, coatings, metalworking fluids and lubricants, inks and mining. Kraton offers its products to a diverse customer base in numerous countries worldwide.

Supply and Distribution

In response to strong and growing demand for Cariflex™ Polyisoprene Products, we have expanded both our U.S. plant in Ohio where Cariflex polyisoprene rubber is manufactured, and our Cariflex polyisoprene latex production facility in Brazil. With significantly increased capacity and an unmatched global service network, you can be assured of secure supplies and prompt delivery – within 72 hours – anywhere in the world.

LEGAL DISCLAIMER

Kraton Corporation and all of its affiliates, including Kraton Chemical, believe the information set forth herein to be true and accurate, but any recommendations, presentations, statements or suggestions that may be made are without any warranty or guarantee whatsoever, and shall establish no legal duty on the part of any Kraton affiliated entity. The legal responsibilities of any Kraton affiliate with respect to the products described herein are limited to those set forth in Kraton’s Conditions of Sale or any effective sales contract. NOTE TO USER: by ordering/receiving Kraton product you accept the Kraton Conditions of Sale applicable in the region. All other terms are rejected. Kraton does not warrant that the products described herein are suitable for any particular uses, including, without limitation, cosmetics and/or medical uses. Persons using the products must rely on their own independent technical and legal judgment, and must conduct their own studies, registrations, and other related activities, to establish the safety and efficacy of their end products incorporating any Kraton products for any application. Nothing set forth herein shall be construed as a recommendation to use any Kraton product in any specific application or in conflict with any existing patent rights. Kraton reserves the right to withdraw any product from commercial availability and to make any changes to any existing commercial or developmental product. Kraton expressly disclaims, on behalf of all Kraton affiliates, any and all liability for any damages or injuries arising out of any activities relating to the use of any information set forth in this publication, or the use of any Kraton products.

Kraton maintains a Cosmetics, Drugs and Medical Device Policy that restricts the use of Kraton’s Products in certain end use applications without Kraton’s prior written consent. Accordingly, Kraton does not guarantee that Kraton’s products will be available for use in all potential end use applications. Kraton’s Cosmetics, Drugs and Medical Device Policy is available on Kraton’s website at www.kraton.com.
